

Join the Yamaha dots

YAMAHA are a well respected company with a wide range of products. At Estuary Marine they are involved in marine motors and jet skis but Yamaha also make a big range of musical instruments and electrical gear.

The common theme in all Yamaha products is quality and reliability.

Yamaha outboard motors have a big share of the marine market with about 43 percent saturation.

Their outboards represent the very latest in technology, making them the most sought-after motor in Australia.

Yamaha have just announced that from May 1, all marine products will be protected by data-dot technology.

This means that a customer will have their name matched to the actual product by the embedded data dots.

This enhances the security and safety of any Yamaha product, which will be a big bonus to potential customers.

Data-dot technology offers the customer peace of mind in owning any Yamaha product.

This technology will be delivered without cost to Yamaha customers.

For all Yamaha products, protected by data-dot technology from May 1, come down to Estuary Marine at Panton Road.

- Happy boating from the Estuary Marine crew.

- An array of birdlife can be found around waterways
